

# ALANINE

2017

- 9,100 sqm of total surface
- 5 floors
- Common facilities: kitchen, meeting room, showers
- Home of Startlab, the life sciences incubator @Biopôle

# ALANINE

2017

The Alanine building is built in line with the will of Biopôle to promote a vibrant community dedicated to life sciences. It offers five floors equipped with laboratories and offices welcoming various companies, including an incubator to support and commercial development of scientific and innovative projects.

An architectural rendering of a modern building complex. The buildings are white with flat roofs covered in green vegetation. The layout includes several interconnected rectangular blocks, some with central courtyards. The surrounding area is landscaped with greenery and a blue water feature in the background.
